

Claims

1. A child harness (40) that includes a child carrying pouch (130) which comprises a
5 generally flexible piece of material (13) that has side edges which define at least a
part of a respective leg opening (50) in the lower part of the pouch, wherein said
piece of material (13) includes an elastically flexible sheet that is enclosed in a fabric
casing (68, 69) that comprises a first piece of fabric (69) on one major surface of the
sheet and a second piece of fabric (68) on the other major surface of the sheet, and
10 wherein said pieces of fabric are sewn together to provide a seam (61),
characterised in that the seam (61) is placed on one major surface of said piece of
material (13) in the region of a respective leg opening (50) at a distance of at least
0.5 cm from the edge (51) of said leg opening.
- 15 2. A child harness according to Claim 1, **characterised in that** the seam (61) is located
at a distance of at least 1 cm from the edge of said leg opening.
3. A child harness according to Claim 1 or 2, **characterised in that** the piece of
20 material (13) includes in its lower part a central strip-like portion (140) which can be
displaced longitudinally and received in a coupling element (30) on the front side of
the harness; and in that upper laterally situated edge parts of said piece of material
are releasably connected to adjacent parts of the harness that are intended to be
carried on the front side of the wearer, wherein the seam (61) extends at a distance
from the edge of said piece of material also along the strip-like part (140).
